Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 09 March 2005.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.

DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 1-18 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The ratio of the number of particles having an average circularity or 0.0970 or greater and 0.950 or less cannot be ascertained from the written description. One of ordinary skill in the art at the time of the invention was made could not use or calculate the ratio data.

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 1-18 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The ratio of the number of particles having an average circularity or 0.0970 or greater and 0.950 or less is vague, indefinite, and confusing. Although it is appreciated by the Examiner that the amounts of particles 0.0970 or greater and 0.950 or less is meant to be low (5% or less and 10% or less, respectively), how this ratio is determined cannot be ascertained from the description. It

Art Unit: 1756

is not clear how the fractional values of "3/5 or less" and "7/5 or greater" are determined and how the ratio is affected, especially by a fractional value that is expressed with the qualifier "or less" and "or greater".

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

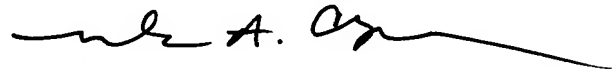

6. Claims 1-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Suzuki (6,746,810) in view of each of Yamazaki (6,475,689), Nishimori (6,617,091), and Tomita (2004/0053154). Suzuki (claims) teaches a replenishing toner image formation method and related applications. Suzuki teaches a similar toner have the same size and a particular shape coefficient (col. 9 and col. 26-29). Suzuki does not specifically teach the average circularity. Each of Yamazaki (col. 14 lines 35-67), Nishimori (col. 14+), and Tomita (paragraph 69) teach the criticality of toner circularity and related shape. It would have been obvious to one of ordinary skill in the art to employ the direct teachings of Yamazaki, Nishimori, and Tomita as the replenishing toner of Yamazaki because of the known use and effect of such toners as specifically taught by each reference
